

Avalski Venac

# Avala Land and Community: Re-Inventing Belgrade's *Hausberg*

Beatrice Kiser and Corina Tripet

The highest peak on the city's horizon, the mountain of Avala (511 m), is located 16 km south of Belgrade's historic town and one of the first landscapes protected as a landmark and national monument in Serbia 150 years ago. Today, the mountain is surrounded by remaining agricultural patches and growing suburbs. The construction of a highway encircling the city has brought this former weekend retreat in close range, attracting more and more citizens who try to escape the saturated city centre and its increasing real estate prices.

Climbing the Avala mountain, a popular weekend activity for Belgradians and the Serbian people, offers views of the city and Pannonian Plain to the north and into the Šumadija mountains in the south. A hotel, restaurants, hiking paths, and camping grounds cater to the visitors, while the main attraction remains the Avala Television Tower, destroyed by the 1999 NATO bombing and rebuilt entirely a few years later. Several national monuments were erected on the mountain, adding a strong symbolic meaning to the public character of this place. As one of Serbia's most maintained landscapes and memorial sites, it has been developed as a tourist destination in Belgrade's vicinity. It also used as an essential source of Avalide, a local stone that used to be extracted in the Avala quarries. The mountain was declared successively a "national park," "public property of general interest," and is today named a "sports and leisure area" by the 2021 Belgrade Master Plan. With growing importance as an affordable neighbourhood with a good connection to the city, the public landscape has a vital role in the urban consolidation of the periphery of Belgrade.

AVALA LAND AND COMMUNITY

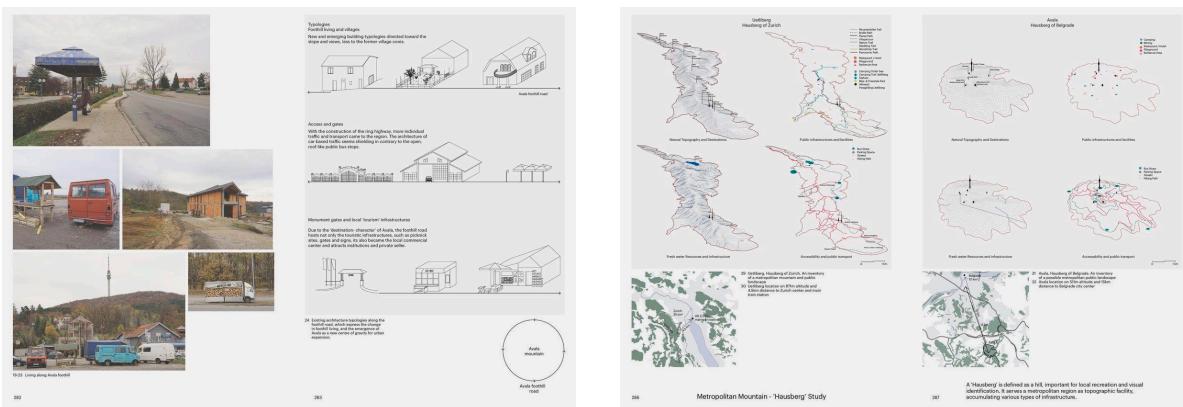

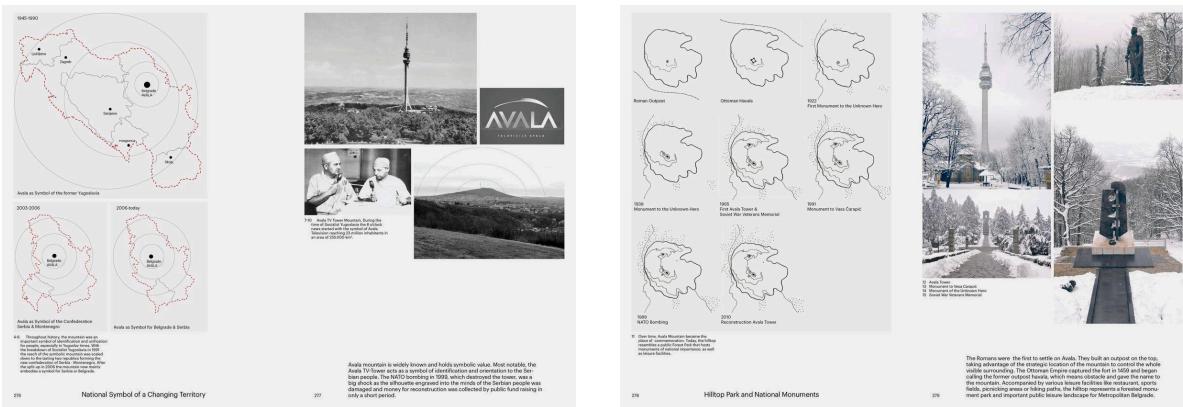

Re-inventing Belgrade's 'Hauberg'

BELGRADE UNBUILT (1/2)  
Spring 2018

1 Topographic view of Serbia. Avala rises over Belgrade, the capital of Serbia. The mountain is located in the northern part of the country, in the Pannonian region. The mountain topographic view shows the mountain's height of 514 meters above sea level. The mountain is located in the northern part of the country, in the Pannonian region. The mountain topographic view shows the mountain's height of 514 meters above sea level.

2 Topographic Landmark and Natural Border

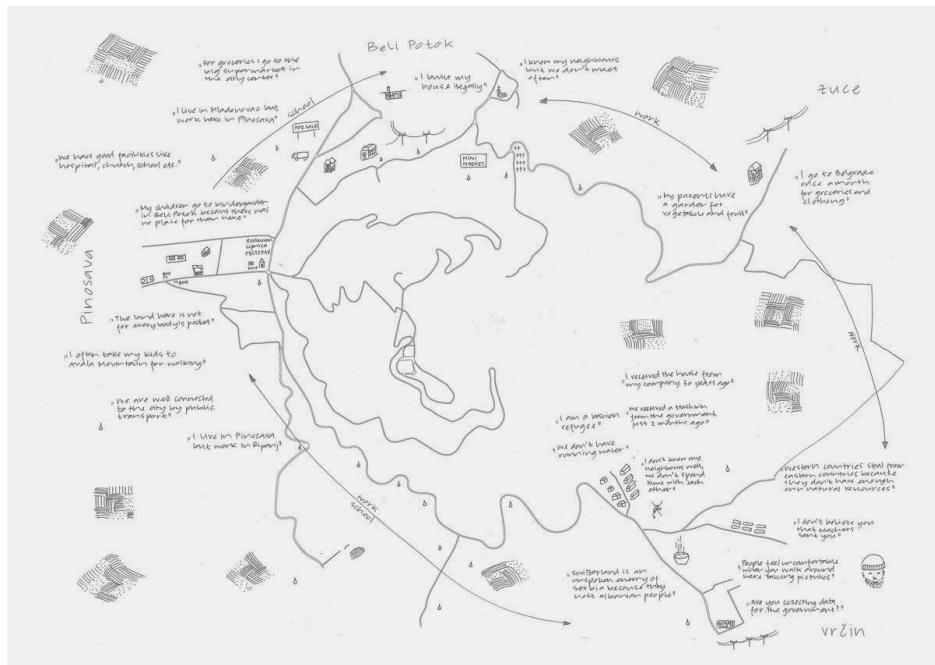

3 Avala with its height of 514 meters is the first high point in the south of the City of Belgrade. The mountain is located in the northern part of the country, in the Pannonian region. The mountain belongs to the Šumadija region, and has formed during the Miocene Epoch which it has been an isolated island in the Pannonian sea.

The project **Avala Land and Community: Re-inventing Belgrade's Hausberg** explores how the memorial mountain could perform as a multi-layered public landscape. Based on the *Hausberg* concept, the proposal reinvents Avala, a metropolitan landscape performing as a tourist destination, recreational and resource space while strengthening local communal identity. Ideas of existing territorial reorganisation and the formation of the "Avalski Venac" community are reactivated and put forward to solve the growing community's water shortage problem. The unique topographical location of Avala is utilised more efficiently by densifying water-related infrastructure. The project establishes public spaces for the municipality at Avala's foot and a water reservoir on its top to supply the peripheral metropolitan region of Avalski Venac with fresh water.

View from Avala hilltop onto the expanding foothill villages.

## Local community and urban growth along Avala's foothill ring road.

## ACKNOWLEDGEMENTS

We would like to thank Andreja Tutundžić, from the University of Belgrade, Faculty of Forestry, for the constructive discussions sharing your precious knowledge with us. Thanks to Davor Ereš and Jovana Bosković for your valuable input.
